

Long-term Goal

Having a knowledge of Front-End development will help me to have more options and opportunities in the future. My goal is to improve my existing skills (English, HTML, CSS, JavaScript) and learn new one (KnockOutJS, ReactJS, Ruby, Python, NodeJS). My objective is to complete this program in 09 months or less (08 months for example). Of course, completing in 09 months will require a lot of hard work and commitment. I would be ok if I managed to complete the course in 09 months but completing it in 10 months would not be too bad either. With the right focus I believed I can complete the program in 09 months.

Learning Schedule

I will do my almost best to give 20 to 30 hours from my time to this diploma in a week. At the moment the general overall look of my schedule would be something like this; Monday to Friday from 11am to 3pm is my job timings and Sunday, I will do very little to no work. I decided to give daily 3 to 4 hours from Monday to Saturday to my diploma, Wednesday (or another day fixed by my mentor) will be my call with my mentor and Sunday will be a fun day.

Overcoming “Frustration”

In this path I fully anticipate challenges. Some of these challenges could be “frustration”. The first thing I will do to overcome these “frustrating” moments is not to get frustrated in the first place. I will do what I have always done; I will break it down, step by step dissect the challenge and overcome it. If I am still unable to solve the problem, I will take a break from my work and come back with a different approach. I could search around on the internet for a solution; ask for help directly from my mentor or post on the OpenClassrooms workplace. I would also ask my fellow classmates for help.

Another way I experience to get rid of frustration is to do exercise (walking) when you do a gym your mind will be relaxed and fresh; or sometimes having fun at the cinema; and you can work more effectively and efficiently.

My S.M.A.R.T learning goals

- Take business English courses and significantly improve my English read, spoken and written in the next 10 months
- Finish with all the required courses of each project on the platform
- Have a very good command of WordPress, HTML, CSS, JavaScript, ReactJS and Ruby in the next 06 months.
- Start learning and command KnockOutJS from the 07th month until my final diploma; and also continue with ReactJS
- Start learning Python from the 10th month
